# Key Insights & Threats

## Critical Threat Pests

No pests above critical thresholds detected.

## Key Insights

1. Pest population trends indicate a low risk of infestation, with all pests below their respective ETL thresholds.
2. Disease pressure is also very low, with no infected spots or area reported for CLCuV and Wilt.
3. The overall severity score of 0.0/30 suggests that the cotton crop in Mailsi Tehsil is at a low risk of damage from pests and diseases.

# Expert Advisory for Farmers

Follow these practical steps to safeguard the crop based on current field conditions:

## Actionable Guidance (English)

- Continue monitoring pest populations and disease pressure to ensure early detection of any potential issues.
- No chemical applications are recommended at this time, as all pest counts are below their respective ETL thresholds. Focus on maintaining good agricultural practices and crop health.
- Coordinate with local extension services for regular monitoring and reporting, and consider organizing farmer-to-farmer knowledge sharing to maintain a proactive approach to IPM.
