

Pest Advisory Report

KEHROR PACCA

Timeframe: 3 WEEK MAY 2022

Survey Summary

Overall Severity:	LOW (0.0/30)
Risk Level:	LOW
Action Urgency:	MONITOR
Economic Impact:	Estimated yield loss: 0-5%
Total Spots Surveyed:	43
Total Area Covered (acres):	264.0
Pest Pressure per Acre:	0.05
Threat Pests:	None

Key Insights & Threats

Critical Threat Pests

No pests above critical thresholds detected.

Key Insights

1. Pest populations are generally low, with Whitefly being the most prevalent. Thrips population is also moderate.
2. Disease pressure is negligible, with no reported infections.
3. The overall risk level remains **LOW** due to the absence of significant pest or disease pressure.

Expert Advisory for Farmers

Follow these practical steps to safeguard the crop based on current field conditions:

Actionable Guidance (English)

- Monitor fields regularly for any signs of Whitefly infestation and take action if necessary.

Severity score: 0.0/30.

- For Thrips management, consider using integrated pest management (IPM) strategies like crop rotation and biological control. Chemical controls can be used as a last resort.

- Continue monitoring the fields and report any changes in pest pressure to the Punjab Agriculture Department for coordinated action.
