

Pest Advisory Report

KABIR WALA

Timeframe: 3 WEEK MAY 2022

Survey Summary

Overall Severity:	LOW (0.2/30)
Risk Level:	LOW
Action Urgency:	MONITOR
Economic Impact:	Estimated yield loss: 0-5%
Total Spots Surveyed:	30
Total Area Covered (acres):	193.0
Pest Pressure per Acre:	0.02
Threat Pests:	None

Key Insights & Threats

Critical Threat Pests

No pests above critical thresholds detected.

Key Insights

1. Pest population trends indicate a low risk of infestation, but Army Worm is above the ETL threshold.
2. Disease pressure remains very low, with no infected spots or area reported.
3. The overall economic impact is expected to be minimal due to the low pest and disease pressure.

Expert Advisory for Farmers

Follow these practical steps to safeguard the crop based on current field conditions:

Actionable Guidance (English)

- Monitor fields closely for any signs of Army Worm infestation and take prompt action if necessary.
- Consider implementing Integrated Pest Management (IPM) strategies, such as crop rotation and biological control methods, to minimize the risk of Army Worm infestation.
- Coordinate with local agricultural experts or extension services to stay informed about best practices for managing pest pressure in your area.
