

Pest Advisory Report

MANKERA

Timeframe: 1 WEEK MAY 2022

Survey Summary

| | |
|-----------------------------|-------------------------|
| Overall Severity: | LOW (0.0/30) |
| Risk Level: | LOW |
| Action Urgency: | MONITOR |
| Economic Impact: | 0% estimated yield loss |
| Total Spots Surveyed: | 3 |
| Total Area Covered (acres): | 4.0 |
| Pest Pressure per Acre: | 0.0 |
| Threat Pests: | None |

Key Insights & Threats

Critical Threat Pests

No pests above critical thresholds detected.

Key Insights

1. Pest population trends indicate a low risk of infestation, with all pests below their respective ETL thresholds.
2. Disease pressure is also low, with no infected spots or area reported for CLCuV and Wilt.
3. The overall severity score remains LOW, indicating minimal economic impact.

Expert Advisory for Farmers

Follow these practical steps to safeguard the crop based on current field conditions:

Actionable Guidance (English)

- Continue monitoring fields regularly to detect any potential pest issues early on. No action required at this time.
- No chemical applications are necessary at present. Focus on maintaining good agricultural practices and crop health.
- Coordinate with local extension services for guidance on integrated pest management (IPM) strategies, if needed.
